

PART 5: PROMPT ENGINEERING CHALLENGE

1. Summarising Notes

Prompt

Summarize the following notes in simple bullet points for exam preparation. Artificial Intelligence is the simulation of human intelligence in machines. Machine Learning is a subset of AI where systems learn from data. Generative AI creates text, images, and videos using trained models.

AI Response

- Artificial Intelligence simulates human intelligence
- Machine Learning is a part of AI
- ML systems learn from data
- Generative AI creates new content like text and images

Why the Prompt Worked

The prompt clearly asked for short bullet points and specified the purpose as exam preparation, so the AI generated notes.

2. Generating a Study Plan

Prompt

Create a 7-day study plan for a beginner for learning Python programming.

AI Response

Day 1: Introduction to Python and installation
Day 2: Variables and data types
Day 3: Conditional statements
Day 4: Loops
Day 5: Functions
Day 6: File handling
Day 7: Mini project practice

Why the Prompt Worked

The prompt clearly mentioned the duration, topic, and skill level, helping the AI generate an organized study plan.

3. Creating Interview Questions

Prompt

Generate five Python interview questions for beginners.

AI Response

1. What is Python?
2. What are lists in Python?
3. What is the difference between a list and tuple?
4. Explain loops in Python.
5. What is a function?

Why the Prompt Worked

The prompt specified both the programming language and difficulty level, allowing the AI to generate relevant beginner level questions.

4. Writing a Resume Summary

Prompt

Write a resume summary for a second-year Computer Science student with Python and GitHub knowledge.

AI Response

Motivated Computer Science student with knowledge of Python programming, GitHub, APIs, and problem-solving skills. Interested in AI and software development with a willingness to learn new technologies.

Why the Prompt Worked

The prompt clearly specified the background, skills, and field, helping the AI create a professional summary.

5. Creating a Lesson Plan

Prompt

Create a lesson plan for teaching basic Python programming to beginners.

AI Response

Topic: Introduction to Python

Objectives:

- Understand Python basics
- Learn variables and data types
- Write simple programs

Activities:

- Code demonstrations
- Practice exercises
- Small quiz

Assessment:

- Write a simple Python program

Why the Prompt Worked

The prompt clearly mentioned the subject and target audience, so the AI generated a structured beginner friendly lesson plan.
